Fund manager commentary

Der Zukunftsfonds closed the month of September with a gain of +1.47% in the C share class and +1.49% in the R share class. Year-to-date, this corresponds to an increase of +8.45% for the C share class and +8.17% for the R share class. Market developments in September were once again mixed. While the DAX (-0.1%) and MDAX (-0.1%) remained virtually unchanged, the Nasdaq 100 (+5.0%), S&P 500 (+3.2%), Nikkei 225 (+4.9%), and MSCI AC World (+3.1%) posted solid advances. Gold recorded an exceptionally strong gain of +11.5%, while Bitcoin rose by +4.7% over the month. Against this favorable backdrop, the Zukunftsfonds achieved its ninth consecutive monthly increase, marked its 55th all-time high of the year, and ended September at yet another record high. During the month, we added to our position in TotalEnergies, taking advantage of the attractive oil price.

We also increased our holdings in Glencore. A partial reduction was realized in Southern Copper, while shares of IBM were newly added to the portfolio. The ETF on clean energy companies was sold in full at a profit. In addition, we expanded our long VIX position to three contracts. The cash ratio remained high at 51% at the end of the reporting period. 2025/09/30

Volker Schilling, responsible since 05/02/2022

Fund portrait

The fund's investment objective is to achieve the most stable growth in value possible. To achieve this, the fund invests worldwide in the various asset classes, primarily equities, bonds as well as precious metals and alternative investments within the scope of the instruments permitted for the fund in accordance with the UCITS Directive. In doing so, the fund strives for a balanced diversification in all asset classes. As part of a global and diversified wealth management approach, the structure of the fund is monitored and regularly adjusted to market changes. The fund does not follow a benchmark.

Performance in 12-months-periods

Past performance is not a reliable indicator of future performance. All performance assumes a reinvestment of the distributions and an investment amount of 1,000 EUR and comprises twelve months each. The values marked with an * refer to a shorter period of time (since launch). Net performance: In addition to all costs incurred in the fund, the respective issue charge is also taken into account. This is deducted from the investment amount at the beginning of the performance period presented. The redemption charge, if such a discount is levied, will be deducted when the fund units are returned. Any custody fee that may be incurred that reduces performance is not taken into account. Gross performance: Corresponds to the net value development, but does not take into account an issue charge.

Notice

The summary risk indicator is a guide to the level of risk of this product compared to other products. It shows how likely it is that the product will lose money because of movements in the markets or because we are not able to pay you. We have classified this product as 2 which is 2 a low risk class. This rates the potential losses from future performance at a low level, and poor market conditions are very unlikely toimpact the capacity to pay you.

Further information on the risks can be found in the document: Key information sheet (PRIIPs)

Recommended holding period

Recommendation

The risk indicator assumes you keep the product for 3 years. The actual risk can vary significantly if you cash in at an early stage and you may get back back less.

Opportunities

Investors can participate in the price increases of the international securities markets. The capital is invested broadly in individual stocks as well as different asset classes. Due to the focus on a broad diversification in different asset classes (Equities, bonds, currencies, commodities, precious metals), and due to active risk management, the fund aims to achieve an attractive Risk-Return profile. The fund can use derivatives to hedge exposure against potential losses or increase exposure to achieve higher returns. Investment in foreign currencies may positively influence the fund due to changes in exchange rates.

Risks

Although the fund aims to achieve steady growth in value, this cannot be guaranteed. The fund is subject to the typical price change risks and the market cycle of securities markets. It is exposed to the wide variety of general trends and tendencies in the global financial markets, some of which are based on irrational factors.

Transactions with derivatives for hedging purposes reduce the overall risk of the fund but can reduce the return opportunities. If transactions are made with derivatives as part of the investment strategy, the Fund's risk of loss may increase, at least temporarily. The Fund may be the victim of fraud or other criminal activity. The loss of trading persons may result in an adverse effect on investment performance. Custody Risks: There may be a risk of loss associated with the safekeeping of assets, particularly abroad, which may result from insolvency, breaches of duty of care or abusive conduct by the custodian/sub-custodian. The Fund may enter various transactions with counterparties. If a contractual partner becomes insolvent, it may no longer be able to settle outstanding claims of the fund or may only be able to settle them in part.

- Information on further risks can be found in the Basisinformationsblatt and the VKP.
- In particular, the fund shows increased fluctuations in the unit price due to its composition and the possible use of derivatives.

Important notes

Source of all data unless indicated otherwise: HANSAINVEST.

This is a marketing communication. Please read the sales prospectus (in German) and the key information document (in German) before making a final investment decision. The basis for the purchase is formed by the applicable sales documents, which contain detailed information on the individual risks associated with the investment. The sales prospectus and the key investor information are exclusively available in German and in electronic form. We will send you printed copies free of charge on request.

The net asset value of investment funds is subject to fluctuations to differing degrees, and is no guarantee that the investment objectives will be achieved. There is the risk that the investor will suffer a financial loss as a result of the investment acquired.

By acquiring the investment acquired, the investor merely acquires units in a fund and not the underlying assets of the fund, e.g. a building or shares in a company.

Performance is calculated using the BVI method (in German). Information on the precise method of performance calculation can be found in German on the Internet under Description of methods of calculation .

Future performance is subject to taxation. This is dependent on the personal situation of the respective investor and can change in future

Total fund assets refer to the fund assets of all unit classes belonging to the fund. Total fund assets are shown in the currency of the unit class that was issued first.

The ongoing costs shown (total cost ratio) were incurred in the last financial year of the fund; for new funds, this is an estimate for the first financial year. The costs incurred can fluctuate from year to year and reduce the investor's earnings prospects. Further information on costs and any performance-based remuneration and

its composition can be found in the key investor information.

When investing in the fund Der Zukunftsfonds R, a performance fee is charged to the investor if the increase in value of the fund exceeds the specified money market investment as a benchmark. The performance fee is calculated as follows and reduces the positive performance of the investor. 20 % of the amount by which the share value development at the end of a settlement period exceeds the income from a money market investment used as a benchmark in that settlement period, but in total up to a maximum of 20 % of the average value in the settlement period. A negative performance must be made up.

Any percentages indicated in the investment structures or asset breakdowns shown generally relate to the total fund assets. Only a subset of the asset types is used as a basis in each case for the presentation of individual structures (e.g. for industries, only the share of equities), with the result that a total of 100% is not necessarily achieved.

The top securities (if indicated) are presented for a maximum of 60% of fund assets.

The figures shown are rounded, hence the totalled values can deviate from 100%.

The cut-off time refers to the daily close of order acceptance by the fund's depository bank. This is typically earlier for the investor's custodian office.

This document and the information contained in it are not intended for US persons and must not be disseminated in the United States.

A summary of investors' rights in German can be found on our website under ${\color{blue}\textbf{Compliance}}$.

The sale of funds can be revoked at any time in accordance with the provisions of the German Investment Code.
